EDUCATION

University of California, Los Angeles (UCLA)

Los Angeles, CA

Bachelor of Science in Computer Science, GPA: 3.72

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL, Java

Agentic AI & ML: PyTorch, MLX, scikit-learn, claude-agent-sdk, MCP, RAG, QLoRA

Frameworks & Tools: Node.js, React.js, FastAPI, Docker, Supabase, MongoDB, Azure, Git

EXPERIENCE

SAF3AI

June 2026 – Present

AI Security Engineer Intern

Sunnyvale, CA

- Designed a layered, on-premises and air-gapped AI cybersecurity guardrail: a multi-tier cascade of four QLoRA-fine-tuned 8B LLMs with retrieval augmentation.
- Screened model inputs for prompt injection, jailbreaks, and PII exfiltration into schema-validated JSON verdicts, with a distilled front-line classifier catching 92% of attacks while clearing 76% of benign traffic.

PATH

Oct 2025 - June 2026

Software Developer, LA Blueprint

Los Angeles, CA

- Built a full-stack inventory management platform to streamline operations for 200+ supervisors and 8,000+ volunteers, migrating the workflow from manual spreadsheets to a centralized React and Supabase database.
- Designed relational schema tables and Supabase Row Level Security policies for ownership-based access control.
- Built debounced, URL-synced search/filter components and shipped Figma designs as production React UI.

Glow Action

Jun 2024 - Sep 2024

Software Development Lead Intern

Remote

- Led a team of interns to build Sol.ai, a multilingual chatbot on the OpenAI API and React that delivered support across five languages to help refugees integrate into U.S. society.
- Deployed the chatbot's FastAPI endpoint to Azure App Service via Docker and GitHub Actions CI/CD, reliably serving up to 600 users.

PROJECTS

Bloom | *React, TypeScript, ReactFlow, Zustand, Tailwind*

2026

- Built and deployed on Vercel a React/TypeScript app with a nature-themed UI that grows Markdown notes into an interactive mind-map, where right-clicking a node calls an LLM to brainstorm and sprout new sub-idea nodes.
- Integrated Anthropic, OpenAI, and Gemini APIs for on-demand idea generation, managing document and graph state in a Zustand store that renders the live graph visualization through ReactFlow.

Rehorse | *Python, Claude Code (hooks, subagents, plugins), Git, pytest*

2026

- Built an open-source Claude Code plugin that sandboxes AI coding agents in isolated git worktrees, so unattended changes never touch the user's branch until a human merges them.
- Enforced a test-first workflow with Python hook scripts (500+ tests): tests are written before implementation, locked during it, and an independent reviewer agent checks the change before merge.
- Evaluated on 13 real bugs from the rich and FastAPI projects, graded by the maintainers' own tests: 12 fixed, and the reviewer agent caught a regression the projects' test suites had missed.

Bruin Bites | *React Native, MongoDB, Figma*

2025

- Built the map and profile screens for Bruin Bites in React Native, a mobile app helping UCLA students discover local discounts and AI-generated recipes.
- Integrated MongoDB-backed data into responsive layouts and translated Figma designs into production UI, collaborating with designers and backend developers.

Pokemon Mega Evolution Predictor | *Python, scikit-learn, pandas*

2025

- Built an end-to-end ML pipeline and trained Logistic Regression and One-Class SVM on a 1,000+ row dataset, correctly predicting four mega evolution candidates ahead of the game's release.
