EDUCATION

University of California, Los Angeles (UCLA)

Bachelor of Science in Computer Science, GPA: 3.77

Los Angeles, CA

Sept. 2025 - June 2028

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, PostgreSQL, Java

Agentic AI & ML: LLM Evaluation, scikit-learn, Ollama, QLoRA, RAG

Frameworks & Tools: Node.js, React.js, FastAPI, Docker, Supabase, MongoDB, Azure, Git

EXPERIENCE

SAF3AI

June 2026 – Sept. 2026

AI Security Engineer Intern

Sunnyvale, CA

- Designed a tiered, on-premises cybersecurity guardrail that featured 4 QLoRA-fine-tuned LLMs for specialized diagnosis and a Qwen3.6-35B agent with user and conversation memory to consolidate and deliver rationales.
- Screened model inputs for prompt injection, jailbreaks, and PII exfiltration into schema-validated JSON verdicts, with a distilled front-line classifier catching 92% of attacks while clearing 76% of benign traffic.

PATH

Oct. 2025 - June 2026

Software Developer, LA Blueprint

Los Angeles, CA

- Built a full-stack inventory management platform to streamline operations for 200+ supervisors and 8,000+ volunteers, migrating the workflow from manual spreadsheets to a centralized React and Supabase database.
- Designed relational schema tables and Supabase Row Level Security policies for ownership-based access control.
- Built debounced, URL-synced search/filter components and shipped Figma designs as production React UI.

Glow Action

June 2024 - Sept. 2024

Software Development Lead Intern

Remote

- Led a team of interns to build Sol.ai, a multilingual chatbot on the OpenAI API and React that delivered support across five languages to help refugees integrate into U.S. society.
- Deployed the chatbot's FastAPI endpoint to Azure App Service via Docker and GitHub Actions CI/CD, reliably serving up to 600 users.

PROJECTS

Rehorse | Python, Claude Code, Git, pytest

2026

- Built an open-source Claude Code plugin that sandboxes AI coding agents in isolated git worktrees to prevent changes without user review.
- Enforced test-first development within Claude Code by using Python hook scripts, and reduced hallucination by launching an independent agent to review changes before presenting it to the user.
- Evaluated on 13 bugs from the rich and FastAPI repositories, graded by the maintainers' tests: 12 fixed, and the independent agent caught a regression that the projects' test suites missed.

Bloom | React, TypeScript, ReactFlow, Zustand, Tailwind

2026

- Built and deployed on Vercel a React/TypeScript app with a nature-themed UI that grows Markdown notes into an interactive mind-map, where right-clicking a node calls an LLM to brainstorm and sprout new sub-idea nodes.
- Integrated Anthropic, OpenAI, and Gemini APIs for on-demand idea generation, managing document and graph state in a Zustand store that renders the live graph visualization through ReactFlow.

Bruin Bites | React Native, MongoDB, Figma

2025

- Built the map and profile screens for Bruin Bites in React Native, a mobile app helping UCLA students discover local discounts and AI-generated recipes.
- Integrated MongoDB-backed data into responsive layouts and translated Figma designs into production UI, collaborating with designers and backend developers.

RAG Search Engine | C++

2026

- Built a retrieval-augmented generation system in C++, implementing a binary search tree to retrieve relevant documents from an index in logarithmic time.
- Queried an LLM API and augmented each prompt with the retrieved documents, grounding the model's answers in the relevant source material.
